

BYRYZN OPULUXE V

PROFESSIONAL-GRADE

Cosmetic Skin Rejuvenation

Powered by
PLLA, PDRN, and
postbiotic technology,
BYRYZN Opoluxe V
is designed to enhance
skin vitality, hydration,
and luminosity.

Discover the Science of Radiant Skin

Formulated in Korea — a global leader in innovative skincare — BYRYZN Opoluxe V brings together cutting-edge ingredients and advanced cosmetic science to help support skin vitality, hydration, and visible radiance.

This professionally applied cosmetic formulation reflects the highest standards of Korean skincare innovation.

KEY INGREDIENTS

- ✔ **PLLA (POLY-L-LACTIC ACID)**
A biocompatible polymer used in cosmetic formulations to support the appearance of firmer, smoother skin by enhancing surface texture and elasticity.
- ✔ **TROUT DNA (PDRN)**
A DNA-based cosmetic ingredient that helps improve the appearance of skin vitality and texture, contributing to a refreshed, more radiant look.
- ✔ **HYALURONIC ACID (HA)**
A naturally occurring molecule known for its high water-binding capacity. HA helps maintain skin hydration and a plump, supple appearance.
- ✔ **GLUTATHIONE**
An antioxidant that protects against environmental stressors and supports a brighter, more even-looking complexion.
- ✔ **SPHINGOMONAS FERMENT EXTRACT**
A postbiotic ingredient rich in exosomes and ceramides. Sphingomonas ferment extract supports skin barrier function and hydration and has been clinically evaluated for its soothing and revitalising properties.
- ✔ **ADENOSINE**
A skin-conditioning agent that helps smooth the appearance of fine lines and improve surface texture.
- ✔ **AMINO ACID COMPLEX**
Provides essential building blocks that help maintain the skin's structural integrity and resilience.
- ✔ **VITAMIN COMPLEX**
A blend of cosmetic-grade vitamins that nourish the skin and promote a more even, radiant appearance.
